

Airdistributing modules of type ADM for HEPA filters

Airdistributing modules of type ADM (hereafter “the modules”) are used for accommodation of HEPA filters of type HEF of H10-H14 classes.

Modules are installed in a structure of a clean room: on walls or a ceiling, where they are sealed then.

Modules can be installed in clean rooms of medical establishments, in pharmaceutical, electronic, food, etc. enterprises.

Fig. 1 Airdistributing module of type ADM

GENERAL DESIGN

The module (fig. 2, 3, 4) consists of the body 1 made of steel having powder paint covering or of stainless steel. Inside the body the module has a base surface 2 to which filter HEF 3 is drawn in. Hermetic sealing is carried out due to the rubber seal pasted on the perimeter of filter HEF. The sealing of filter HEF with pressing surface 2 is carried out through installation frame by screws, mounted on it. The airdistributing grille 4 that carries out protective, decorative and airdistributing functions is installed at the outlet of the air. Airdistributing grille can be made of punched sheet or special airdistributing grille with airdistributing into 4 sides (fig. 5, 6). The inlet socket can be located in the body of the module – from above – vertically, from the – horizontally and from the side through a slit input to downsize the height of the module. There are clamps 9 with apertures for the purpose of mounting the module onto a ceiling. The ADM body of the module has two connecting pipes 8 for attaching manometers with the purpose of checking of filter pressure drop while operation process. The module has also two connecting pipes inside it for checking the hermetic quality of filter installation in the module.

MARKING

Example of marking: ADM-HS-006 S9

H - a position of an feed socket

H- horizontal (side inlet);
V - vertical (from above inlet);
HS- horizontal with slit inlet.

006- dimension-type of module conforming to the marking of filters HEF (see tables 1, 2, 3)

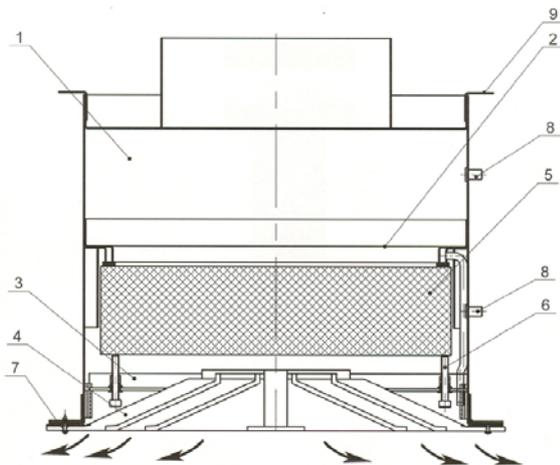

SS- stainless steel sheet

“if there is no notation” – steel with powder painting;
SS- stainless steel sheet;
